SCHOOL OF ENGINEERING AND TECHNOLOGY
Bachelor of Science (Information Technology)**

**Programme Code: SET0126
Duration- 3 Years Full Time**

**PROGRAM STRUCTURE
AND
CURRICULUM & SCHEME OF EXAMINATION
2020**

1. Standard Structure of the Program at University Level

1.1 Vision, Mission and Core Values of the University

Vision of the University

To serve the society by being a global University of higher learning in pursuit of academic excellence, innovation and nurturing entrepreneurship.

Mission of the University

- 1. Transformative educational experience**
- 2. Enrichment by educational initiatives that encourage global outlook**
- 3. Develop research, support disruptive innovations and accelerate entrepreneurship**
- 4. Seeking beyond boundaries**

Core Values

- Integrity**
- Leadership**
- Diversity**
- Community**

Note: Detailed Mission Statements of University can be used for developing Mission Statements of Schools/ Departments.

Vision and Mission of the School

Vision of the School

To become a globally acclaimed institution of higher learning in engineering and technology promoting excellence in research, innovation and entrepreneurship

Mission of the School

- 1. To impart quality education with strong industry & academic connectivity in the expanding fields of Engineering and Technology in a conducive and enriching learning environment.**
- 2. To product technocrats equipped with technical & soft skills and experiential learning required to stay current with the modern tools in emerging technologies to fulfill professional responsibilities and uphold ethical values.**
- 3. To inculcate a culture of interdisciplinary research, innovation and entrepreneurship to provide sustainable solutions to meet the growing challenges and societal needs.**
- 4. To foster collaborative learning and to play adaptive leadership role in professional career and pursuit of higher education through effective mentoring and counseling.**

Core Values

- Industry & Academic Connectivity**
- Experiential learning**
- Interdisciplinary research**
- Global**

1.2 Vision and Mission of the Department

Vision of the Department

To be recognized as the fountainhead of excellence in technical knowledge and research in computer science and engineering to attract students and scholars across the globe

Mission of the Department

- 1. To strengthen core competency of students to be successful, ethical, effective problem solver in Computer Science & Engineering through analytical learning.**
- 2. To promote interdisciplinary research & innovation-based activities in emerging areas of technology globally**
- 3. To facilitate and foster the industry-academia collaboration to enhance entrepreneurship skills and acquaintance with corporate culture.**
- 4. To inculcate in them a higher degree of social consciousness and moral values towards solving interdisciplinary societal problems using industry-academia collaboration**

Core Values

- Competency**
- Global**
- Entrepreneurship Skills**
- Interdisciplinary research**

1.3 Programme Educational Objectives (PEO)

1.3.1 Writing Programme Educational Objectives (PEO)

Program educational objectives are broad statements that describe the career and professional accomplishments that the program is preparing graduates to achieve.

The Program Educational Objectives (PEOs) of UG Program in Computer Science & Engineering are:

PEO-1 The graduates will establish themselves as professionals by solving real-life problems using exploratory and analytical skills acquired in the field of Computer Science and Engineering.

PEO-2 The graduates will provide sustainable solutions to ever changing interdisciplinary global problems through their Research & Innovation capabilities.

PEO-3 The graduates will become employable, successful entrepreneur as an outcome of Industry-Academia collaboration.

PEO-4 The graduates will embrace professional code of ethics while providing solution to multidisciplinary social problems in industrial, entrepreneurial and research environment to demonstrate leadership qualities

Methods of Forming PEO's

- STEP 1 : The needs of the Nation and society are identified through scientific publications, industry interaction and media.
- STEP 2. Taking the above into consideration, the PEOs are established by the Coordination Committee of the department.
- STEP 3. The PEOs are communicated to the alumni and their suggestions are obtained.
- STEP 4. The PEOs are communicated to all the faculty members of the department and their feedback is obtained.
- STEP 5. The PEOs are then put to the Board of Studies of the department for final approval.

[Note: Prepare a file for the same, how you arrive for PEO's]

1.3.2 Map PEOs with Mission Statements:

1.3.3 Program Outcomes (PO's)

PO1:	Computing knowledge:	Understand the basic principles and methods of computer science for solving complex computing problems.
PO2:	Problem Analysis and Design of solutions:	Analyze and formulate a problem, evaluate a computing-based solution to meet a given set of requirements using software development concepts.
PO3:	Modern tool usage:	Ability to select and apply current techniques and modern IT Tools for innovative software solutions.
PO4:	Technical Skill Development	To develop and sharpen programming, networking, and other computer science skills required in the field of study/ higher education.
PO5:	Societal Concern:	Utilize the role of computing for solving real life problems and to analyze its global impact on individuals, organizations, and society.
PO6:	Environment and Sustainability :	Actively involved with knowledge, skills and right attitude in environmental context for sustainable development.
PO7:	Ethics:	Recognize ethical principles and moral values for the computing profession in global economic environment.
PO8:	Individual and team work:	Ability to function effectively as an individual or a team member engaged in accomplishes a common goal.
PO9:	Communication:	Development of good communication skills in both written and verbal form to convey technical information effectively and accurately.
PO10 :	Life-long learning:	Ability to recognize the need of training and skills to engage in self-regulating and life-long learning.
PSO1 :	Computer Science	Provide effective and efficient solutions to real life problems using acquired knowledge in Data Mining, graph theory, advanced DBMS and other computer science concepts for continued professional development.
PSO2 :	Information Technology	Explore and provide software solutions of complex problems using information technology concepts like Enterprise Resource Planning, network security, IT infrastructure management.

1.3.5 Program Outcome Vs Courses Mapping Table¹:

1. *Slight (Low)*

2. *Moderate (Medium)*

3. *Substantial (High)*

¹ Cel value will contain the correlation value of respective course with PO.

1.3.5.2 COURSE ARTICULATION MATRIX²

1-Slight (Low)

2-Moderate (Medium)

3-Substantial (High)

² Each course outcome (Based on Blooms Taxonomy-CO1, CO2, CO3, CO4, CO5, and CO6) of the course needs to map with PO. This table evolves once faculty has mapped each course outcomes of their respective course with PO's.

Course Outcome

- **Course Outcomes**–What is it?
 - Course outcomes (COs) are clear statements of what a student should be able to demonstrate on completion of a course.
 - COs should be assessable and measurable knowledge, skills, abilities and attitudes that student attains by the end of the course.
 - It is generally good idea to identify between 4 and 7 outcomes.
 - All courses in a particular programme shall have their own PO.
 - Each CO is mapped to relevant PO.
 - The teaching learning process and assessment process are to be designed in a way to achieve the COs.

Beginning words for Course Outcome:

C. Course Syllabuses

TERM-I

Schools: SET		Batch : 2020-20
		Current Academic Year: 2020-20
		Semester: 1st
1	Course Code	ARP101
2	Course Title	Communicative English-1
3	Credits	2
4	Contact Hours (L-T-P)	1-0-2
5	Course Objective	To minimize the linguistic barriers that emerge in varied socio-linguistic environments through the use of English. Help students to understand different accents and standardise their existing English. Guide the students to hone the basic communication skills - listening, speaking, reading and writing while also uplifting their perception of themselves, giving them self-confidence and building positive attitude.
6	Course Outcomes	<p>CO1 Learn to use correct sentence structure and punctuation as well as different parts of speech. Learning new words its application and usage in different contexts helpful in building meaning conversations and written drafts. Develop over all comprehension ability, interpret it and describe it in writing. Very useful in real life situations and scenarios.</p> <p>CO2 A recognition of one's self and abilities through language learning and personality development training leading up to greater employability chances. Learn to express oneself through writing while also developing positive perception of self. To be able to speak confidently in English</p> <p>CO3 To empower them to capitalise on strengths, overcome weaknesses, exploit opportunities, and counter threats. To ingrain the spirit of Positive attitude in students through a full length feature film followed by a storyboarding activity. Create a Self Brand, identity and self esteem through various interesting and engaging classroom activity</p> <p>CO4 Exposing students to simulators and situations wherein students learn to describe people and situations and handle such situations effectively and with ease. Teaching students how to engage in meaningful dialogues and active conversational abilities to navigate through challenging situations in life and make effective conversations. Learn how to transform adverse beginnings into positive endings – through writing activities like story completion.</p>
7	Course Description	The course is designed to equip students, who are at a very basic level of language comprehension, to communicate and work with ease in varied workplace environment. The course begins with basic grammar structure and pronunciation patterns, leading up to apprehension of oneself through written and verbal expression as a first step towards greater employability.

Syllabus for Discrete Structures Theory Courses

School:		School of Engineering and technology	
Department		Department of Computer Science and Engineering	
Program:		BSC	
Branch:			
1	Course Code	BC110	
2	Course Title	Discrete Structures	
3	Credits	4	
4	Contact Hours (L-T-P)	3-1-0	
	Course Status	Core	
5	Course Objective	This course provides a mathematical foundation for subsequent study in Computer Science, as well as developing the skills necessary to solve practical problems.	
6	Course Outcomes	After the completion of this course, students will be able to: CO-1. Apply the basic principles of sets and operations in sets. CO-2. Classify logical notation and determine if the argument is or is not valid. CO-3. Construct and prove models by using algebraic structures. CO-4. Analyze basic principles of Boolean algebra with mathematical description. CO-5. Construct Permutations and combinations in counting techniques and applications of Recurrence. CO-6. Compose computer programs in a formal mathematical manner.	
7	Course Description	The purpose of this course is to understand and use (abstract) discrete structures that are backbones of computer science. A basic understanding of discrete mathematical topics is fundamental for work in computer science. Many students of this course will find they have familiarity with some of the topics: for instance, truth tables, logical propositions, elements of set theory, as well as basic notions of functions and mathematical induction. In this course we will discover that logical propositions are the underlying model of discrete systems. From this modest beginning we develop algorithms and prove their efficacy. Topics include propositional and predicate logic, basic proof techniques, set algebra and Boolean algebra, recursion and induction and introductory combinatorics. The knowledge gained will be extremely useful in upper level of computer science classes.

List of Experiments

Unit No	S.No	Name of the Practical
1	1.1	Write a Java program to print 'Hello' on screen and then print your name on a separate line
	1.2	Write a Java program to print the sum (addition), multiply, subtract, divide and remainder of two numbers.
2	2.1	Write a Java program to accept a number and check the number is even or not. Prints 1 if the number is even or 0 if the number is odd.
	2.2	Write a Java program that accepts three integers from the user and return true if the second number is greater than first number and third number is greater than second number. If "abc" is true second number does not need to be greater than first number.
3	3.1	Write a Java program to find the maximum occurring character in a string
	3.2	Write a Java program to find first non repeating character in a string.
	3.3	Write a program in java to demonstrate method overloading
4	4.1	Write a program in java to demonstrate multilevel inheritance in java.
	4.2	Write a java program to create an abstract class named Shape that contains two integers and an empty method named print Area (). Provide three classes named Rectangle, Triangle and Circle such that each one of the classes extends the class Shape. Each one of the classes contains only the method print Area () that prints the area of the given shape.
5	5.1	Write a program that creates a user interface to perform integer division. The user enters two numbers in the text fields, Num1 and Num2. The division of Num1 and Num2 is displayed in the Result field when the Divide button is clicked. If Num1 and Num2 were not integers, the program would throw a Number Format Exception. If Num2 were zero, the program would throw an Arithmetic Exception Display the exception in a message dialog box.
	5.2	Write a java program that implements a multi-thread application that has three threads. First hread generates random integer every 1 second and if the value is even, second thread computes the square of the number and prints. If the value is odd, the third thread will print the value of cube of the number

To step up skill and upgrade students' across varied industry needs to enhance employability skills. By the end of this semester, a student will have entered the threshold of his/her 1 st phase of employability enhancement and skill building activity exercise.	
6	Course Outcomes	<p>CO1: <i>At the end of the session this activity will help to ascertain a student's skill and competency level which will lead to effective mapping of his skills and competencies and an effective training need identification and training need analysis model can be drawn</i></p> <p>CO2: <i>At the end of the session a student will have a heightened sense of self awareness, raised levels of self-esteem & self-effectiveness, will have developed a positive mental frame of mind helping a student become more evolved in his/her life .</i></p> <p>CO3: <i>At the end of the session the program would have instilled positive thinking and professional ethics in students and reinforce positive attitude building</i></p> <p>CO4: <i>At the end of the session a student would have learned how to build positive emotional competence in self and learn GOAL Setting and SMART Goals technique</i></p> <p>CO5: <i>At the end of the session a student would have enhanced LSRWG and P (Listening Speaking Reading Writing Grammar and Pronunciation) Verbal Abilities - 1</i></p> <p>CO6: <i>At the end of the session a student would have Understanding of AMCAT + ELITMUS Study patterns for Quantitative aptitude and Logical Analytical Reasoning</i></p>

5	Course Objective	To enhance holistic development of students and improve their employability skills. Provide a 360 degree exposure to learning elements of Business English readiness program, behavioural traits, achieve softer communication levels and a positive self-branding along with augmenting numerical and altitudinal abilities. To up skill and upgrade students' across varied industry needs to enhance employability skills. By the end of this semester, a will have entered the threshold of his/her 2 nd phase of employability enhancement and skill building activity exercise.	
6	Course Outcomes	<p>CO1: <i>At the end of the session a student would have learned what is VMOSA (Vision, Mission, Values and Ethics) and Communication Process. This would help students understand and interpret the deeper meaning of life.</i></p> <p>CO2: <i>At the end of the session a student would have learned Communication Styles and flexing and 4 social styles of communication which will lead to effective and meaningful communication process along with Listening Styles & Listening Skills</i></p> <p>CO3: <i>At the end of the session a student would have learned the Art of giving feedback and probing skills that will help in improving peer to peer and business communication by giving meaningful feedbacks and probing skills to understand, assess and evaluate real life situations better</i></p> <p>CO4: <i>At the end of the session a student would have learned business writing skills and non-verbal communication process to make an impression in written communication process in office or otherwise coupled with positive body language and non-verbal communication</i></p> <p>CO5: <i>At the end of the session a student would have learned MTI (Mother Tongue Influence) Reduction attributes that will help to eliminate the influence of mother tongue in one's speech leading to meaningful communication levels and proficiencies.</i></p> <p>CO6: <i>At the end of the 2nd Level proficiency program in Quant & Aptitude Reasoning abilities a student will be able to coherently reason real life situations, will have more pronounced aptitudinal abilities that will help a student deal with real life situations more effectively</i></p>

CO4: Apply graph-theoretic algorithms to solve the real time problems using minimal spanning trees etc. CO5: Discover the advanced properties and concepts of graphs such as cut-sets and circuits in graph CO6: Examine a graph using matrices to cater their application in real world.	
7	Course Description	The course will cover the fundamental concepts of Graph Theory: simple graphs, digraphs, Eulerian and Hamiltonian graphs, trees, networks, paths and cycles, Cut-sets and circuit.	
8	Outline syllabus	CO Mapping	
	Unit 1	Introduction	
	A	Introduction: Finite and Infinite graphs, Incidence & Degree, Isolated vertex, Pendant Vertex	CO1
	B	Null Graph, Various types of graph, sub graphs, handshaking lemma	CO1
	C	special properties of graphs and various operations on graphs, walks, Path, and circuits connected graph	CO1, CO3
	Unit 2	Trees	
	A	Disconnected graphs and Components, Euler graphs, Operations on graphs more on Euler Graphs	CO2
	B	Hamiltonian paths and cycles, Trees, some properties	CO2, CO3

		of trees	
C		pendant Vertices in a tree, Distance and centers in a tree	CO2
Unit 3		Binary Trees	
A		Basic terminology related to Rooted and Binary trees	CO3
B		Importance of binary tree, Binary search tree	CO3
C		Finding spanning tree of a graph, algorithms to find spanning trees in a weighted graph (Kruskal& Prim)	CO3, CO4
Unit 4		Cut-Sets	
A		Cut-Set, Some Properties of Cut-Set, All Cut-Sets in a graph, concept of planar graph	CO5
B		Fundamental Circuits & Cut-Sets, Connectivity and separability.	CO5
C		Planar graphs, detection of planar graphs, Eulers formula.	CO5, CO6
Unit 5		Matrix representation of graphs	
A		Directed graphs, types of directed graphs.	CO1, CO2, CO6
B		Matrix representation of graph, incidence matrix A(G), sub matrices of A(G), Rank of A(G),	CO5, CO6
C		Circuit matrix, fundamental circuit matrix and finding their Ranks, Relationship among Af , Bf , and Cf and its deduction.	CO5, CO6

5	Course Objective	The main objective of this module is to introduce to the students the concepts of computer graphics. It starts with an overview of interactive computer graphics, two-dimensional system and mapping, then it presents the most important drawing algorithm, two-dimensional transformation; Clipping and an introduction to 3-D graphics.	
6	Course Outcomes	Students will be able to: CO1: Illustrate the applications and techniques of Computer Graphics and current trends CO2: Design various object to create various application. CO3: Select methods for the representation and transformation of graphical images and pictures. CO4: Describe the fundamentals of 2D and 3D CO5: Apply 2D and 3D transformations, projection and viewing contrast CO6: Examine various animation types and algorithmic concepts to apply the animated effects.	
7	Course Description	Computer Graphics is a study of the hardware and software principles of interactive raster graphics. Topics include an introduction to the basic concepts, 2-D and 3-D modeling and transformations, viewing transformations, projections, rendering techniques, graphical software packages and graphics systems.

5	Course Objective	This course introduces the open source Web scripting language PHP and helps in building dynamic Web applications. It defines the Semantics and syntax of the PHP language		
6	Course Outcomes (same as theory course)	CO1: Define regular expressions including modifiers and operators. CO2: Demonstrate PHP programs that use various PHP library functions CO3: Develop PHP scripts to handle HTML forms. CO4: Analyze and solve various database tasks using the PHP language. CO5: Determine the PHP script to validate form data. CO6: Solve common Web application tasks by writing PHP programs.		
7	Course Description	This course discusses the practical problems that PHP solves. It helps in developing server-side cross-platform HTML-embedded scripts to implement dynamic Web pages that interact with databases and files.

List of Experiments

- Write a PHP program to print a message.
- Write a PHP program to find a square of a number.
- Write a PHP program to swap two numbers without using 3rd variable.
- Write a PHP program to find the area of rectangle, square, circle using predefined value.
- Write a PHP program to find factorial of a number
- Write a PHP program to print Fibonacci series upto 17.
- Write a PHP program to implement calculator.
- Write a PHP program to find the smallest number from an array.
- Write a PHP program to arrange the numbers in ascending order.
- Write a PHP program to make a login form and check the input using another PHP page.
- Write a PHP program to find the sum of all elements in a multidimensional array using for loop.
- Write a PHP program to validate a form input.
- Write a PHP program of file handling (reading a file line by line until end of file
- Write a PHP program for uploading a file in PHP.
- Write a program to read input data, from table and display all these information in tabular form on output screen.

TERM-VI

School: SET		Batch : 2020 onwards	
Program: B.Tech.		Current Academic Year: 2020	
Branch: CSE		Semester:	
1	Course Code	BCA043	Course Name- Introduction to AIML
2	Course Title	Introduction to AIML	
3	Credits	3	
4	Contact Hours (L-T-P)	3-0-0	
	Course Status	Core	
5	Course Objective	The course objective to provide a foundation in artificial intelligence techniques for planning, with an overview of the wide spectrum of different problems and approaches, including their underlying theory and their applications	
6	Course Outcomes	<p>After Successful completion of this course the student will be able to:</p> <p>CO1-Demonstrate: fundamental understanding of artificial intelligence (AI)</p> <p>CO2- Illustrate: various applications of AI techniques in intelligent agents, expert systems, artificial neural networks and other machine learning models</p> <p>CO3- Apply: Apply basic principles of AI in solutions that require problem solving, inference, perception, knowledge representation, and learning</p> <p>CO4- Analyze: Mathematical models and apply them to a range of AI problems</p> <p>CO5-Choose: AI planning technology for projects in different application domains</p> <p>CO6- Compare: performance of different learning algorithms</p>	
7	Course Description	This course will offer skill development in the use of software to develop storyboards and 2-dimentional animation including creating, importing and sequencing media elements to create multi-media presentations. Emphasis will be on conceptualization, creativity, and visual aesthetics.	
8	Outline syllabus		CO Mapping
	Unit 1	Introduction	
	A	Foundation of AI, Goals of AI, History and AI course line,	CO1, CO2
	B	Introduction to Intelligent Agents; Environment; Structure of Agent,	CO1, CO2

2	Course Title	System Analysis and Design	
3	Credits	3	
4	Contact Hours (L-T-P)	3-0-0	
	Course Status	Core /Elective/Open Elective	
5	Course Objective	This course aims to introduce techniques of system used by analysts, designers to manage projects, analyze and document systems, design new systems and implement their plans.	
6	Course Outcomes	Student will be able to CO1: Explain what systems are and how they are developed. CO2: Outline different information systems and role of system analyst CO3: Analyze system planning and information gathering techniques CO4: Compare various tools for system design and development CO5: Select appropriate maintenance and security measures for error free system CO6: Solve business problems through analyzing the requirements of information systems and designing such systems by applying analysis and design techniques.	
7	Course Description	This module introduces the students to the concepts and skills of system analysis and design. It includes coverage of Types of system, role of system analysts, Tools for system development , Implementation, maintenance and system security.
